Therefore, we decided to provide the Table of Content in this Canon EOS Rebel 2000 Manual article.

So, for you who want a fast access to get certain information here, all the things you need to do is clicking on the subtopic below. Contents show 1 Introduction to Canon EOS Rebel 2000 Manual 1.1 Overall Look of Canon EOS Rebel 2000 1.2 Canon EOS Rebel 2000 Specification 1.3 Canon EOS Rebel 2000 Features 1.4 Canon EOS Rebel 2000 Price 1.5 Canon EOS Rebel 2000 Manual Introduction to Canon EOS Rebel 2000 Manual As it is always stated before, a manual is something important as a product complement. This manual book is like a gate that takes users to the certain understanding of the product itself. Therefore, the best way to understand a certain product is by referencing to the manual. That's the reason of why do we commit to bring Canon EOS Rebel 2000 Manual to you. With this manual, we would like to help you in understanding or even solving the issues happen to your Canon EOS Rebel 2000 camera, the major and minor ones. Related article Canon EOS Rebel T5i Manual User Guide for Upgraded Rebel Version Overall Look of Canon EOS Rebel 2000 Before directly jumping into the Canon EOS Rebel 2000 Manual, we will talk about the specification of this product first. As far as we know, by reading the specification, it will be so much helpful for you to understand the product deeper. And to begin this conversation, we choose to talk about the most obvious thing first, which is the overall look of this camera. Talking about look, this camera looks stylish with its 5.53.52.3 inches of dimension. And handling this camera will be so much easier since the size is felt just right in your hand. Moreover, it is also supported by very light weight. With those dimension, the weight of the camera is only weight for about 12.52 oz with two batteries and memory card included. Further, considering the importance of viewfinder, Canon sets fixed eyelevel pentaprism over this product. It covers 9090% of field coverage with 0.70x magnification.

Related article Canon EOS Rebel T6 Manual, a Camera Manual for Beginner Photographer Canon EOS Rebel 2000 Specification As you will see at the Canon EOS Rebel 2000 manual, the camera has

been completed with high level of specification. The laser matte and autofocus frame are going to help you in getting the best focus for every images you take. You might get the difficulty in capturing images in overcast area with this camera. So, for that reason, the manufacturer builds flash to create a daylight image result. The flash model brings so many features such as auto mode, flash OFF mode, fillin mode, and redeye reduction. As we all know, analog camera with film roll might looks a little bit old fashioned. But, it has always been the favourite gadget for its lovers. Considering this thing, Canon decided to produce Canon EOS 300. Looking further to the specification of this product, it is bundled with 28mm lens with 2 seconds recycling time. The lens is able to make an optical zoom up to 2.8 times. And to get maximum focus, you need to place your camera in minimal focus distance for about 15 inches. Related article Canon EOS M10 Manual, a Guidance for Elegant and Classy Canon Camera Canon EOS Rebel 2000 Features Further, based on the Canon EOS Rebel 2000 manual, there is one thing you would definitely like about EOS Rebel 2000. It is the AF Illuminator feature. This feature brings the perfect bokeh and focus that is impossible to be done by similar product. Remote Control feature becomes the next thing to be noticed. It gives you the easiness to manage the operation of your camera by certain remote tool. And to support the images hunting process, EOS Rebel 2000 is completed by LCD display Information. This LCD shows you aperture, remote control indicator, autofocus mode, battery condition, flash mode, program, frame counter, selftimer mode, and many more.

This camera needs two items of CR2 Lithium Batteries to supply the energy Canon EOS Rebel 2000 Price There is nothing to worry about buying this Canon's product. To ensure that you are going to make an exact decision, it is better for you to read the reviews below as taken from [www.photographyreview.com](http://www.photographyreview.com). The account named Lthlwpn1979 shares his opinion about EOS Rebel 2000 on August 25, 2003. He said that there are many lenses can be used with this camera. It is also easy to change the settings. The body is light and easy to carry. While talking about price, you can get it by 399 USD and create your own history in photos. Canon EOS Rebel 2000 Manual As it is stated before, the purpose of providing this writing is to bring the Canon EOS Rebel 2000 Manual on to the surface. With this manual, you will be able to get a lot of information related to the product. Something like specification, operation, instruction, camera parts, and others will be perfectly provided here. But, the Canon EOS Rebel 2000 Manual will be provided in PDF. So, if you are about to access it, it will be better if you download the PDF reader software first. Download EOS Rebel 2000 Manual Read other Canon camera manual user guide in this page. Find more Camera user manual several other brands in this page. That's all of the information that we need to tell you about the Canon EOS Rebel 2000 Manual. With this information, we hope that we could update your understanding toward the digital camera news update. Our reprints are high quality, printed on 80gsm superwhite Canon paper on a Canon office copier. The pages are then spiral bound with a clear acetate front cover and red card back cover, held together with a strong white wire. Your manual will lay flat when open and will last for as long as your camera, with a little bit of care. Manuals over 400 pages long may be supplied as more than one book. This camera is also known as USA EOS REBEL 2000 Japan EOS KISS III. I have enough EOS film cameras, I really don't need another one, but a 28105 lens USM as it turned out for 5 It was too good a deal to pass up, so I asked her to buy it. I figured I'd run a roll of film through the camera and then get rid of it. Released in 1999 the Canon EOS 300 also known as the Kiss III and Rebel 2000 around the world arrived just as digital was starting to gain an expensive foothold in photography. It is a pretty plastic affair and is clearly aimed at the amateur photographer. And that would have been a shame because it would have relegated the Canon EOS 300 to just being a film carrier; which would not have done it justice. In one of his asides to camera he asked what was the best car you could buy. Of course you might expect him to say a Ferrari, a RollsRoyce or perhaps a Range Rover. But what he actually said was, "the Ford Fiesta" or whichever small car he happened to be driving at the time. His point was that small cars had come a long way in terms of creature comforts. In the 1980's a base model car was really basic plain seats, windup windows and a distinct lack of creature comforts.

But modern small cars are extremely well specified, with comfortable upholstery, electric windows and air conditioning as standard. Features that you could only have got in an expensive, luxury model in the 1980s. In other words, the reason that the Ford Fiesta was the best car you could buy was not because it had oodles of power or because it was the last word in luxurious refinement but simply because you got an awful lot of car for not a lot of money. And so instead of just being for the very well off such creature comforts were within reach of us, the great unwashed. Specifications Contents 1 Specifications 2 Camera Tour 3 The Canon EOS 300 Command Dial 4 In Operation 5 Thoughts 6 Photos 7 Conclusions So what has that got to do with the Canon EOS 300. Well, behind the polycarbonate facade lies a very well specified and enjoyable camera. In the hand the Canon EOS 300 is quite petite, smaller and lighter than my other EOS film SLRs 620, 1000FN and 30. It has a plastic lens mount but it is certainly feels robust enough when I change lenses. It's very comfortable to hold and use. The viewfinder is nice and bright and has plenty of information to keep you on top of your picture taking. There are seven focus points and focus is one shot or AI Focus continuous depending on the mode you choose. Unfortunately it is not user selectable but is AI Focus in all PASM modes. In manual mode the camera defaults to centre weighted metering. However, it also has a neat flash trick up its sleeve. Now, you will lose flash power at these higher speeds but if you are out in bright sunshine and looking for some fill flash then you're good to go.

Camera Tour Looking down on the camera on the top plate and moving from left to right there is the

command dial with which you select the camera mode, the hotshoe, some small black function buttons, an LCD, the main dial which sits vertically behind the shutter button and has been a mainstay of Canon cameras since the venerable T90 and the shutter button on top of the grip. The Canon EOS 300 Command Dial Then there is the command dial on the left which sets the mode for the camera. The other advantage of this is that it allows you to concentrate on taking pictures rather than obsessing over which fstop or shutter speed to use. It's just as important to learn about what makes a good photo as it is to learn about the geeky technicalities of photography. You can now give the camera as much or as little control as you like. Most likely you will take pictures of people's faces against a bright background in which case you overexpose or use fillflash. You also get a depth of field preview button on the left side of the lens and the ability to rewind a roll of film partway through with the small indented button on the left side. In Operation To load a film simply open the back, pop in your film, stretch the leader across to the orange mark, close the back and turn the camera on. The camera will wind out the whole roll and then rewind one frame at a time as you take pictures. So chronologically frame 36 will be your first. Nice idea but, to be honest, whenever I've done that I've only ever lost 2 or 3 shots anyway, so it's no biggie. One disadvantage is that you will only ever get 36 exposures; there is no squeezing 37 or 38 shots out of a roll of 36 as you can on most manual film cameras. In operation I was impressed with how easy the camera is to operate once you've decided which mode to use. Select your exposure, using the AE lock button if you want to meter from the centre of the viewfinder, halfpress the shutter to focus and then fully press to take your picture.

The autofocus is much quicker than on my singleAFpoint EOS 620, but that camera is nearly fifteen years older. I think I also prefer it to my EOS 30, which is slightly newer than the 300 and is better specified, but is heavier and has more controls to set up. And, of course, it's a camera that also gives you access to the fantastic range of Canon EF lenses and accessories. Thoughts So, is this a great camera. Well, if your idea of great is a LeicaM body with a Summicron lens then it is definitely not a great camera. Or perhaps you prefer a camera hewn from a solid block of Unobtainium and able to stop a rifle bullet should you stray into a war zone Again, no. It is not a collectable camera, it has none of the idiosyncrasies that keep camera nerds happy, and it wasn't designed by one of the gurus of camera design. It is simply a relatively well specified, consumergrade SLR made in the dying days of film camera manufacture. So this gives it two big advantages. Firstly, it has the benefit of 150 years of filmcamera design behind it, so it contains a lot of tech to keep the budding film photographer happy. And secondly, so many were made that you can pick one up pretty cheaply. There is a principle in software engineering which states "Don't make me think." In other words, when you are designing a piece of software for other people to use, the more complicated you make it the more they have to think in order to get it to do what they want it to do and hence the less likely they are to enjoy using it. A modern example is the Sony A7 series of digital cameras. Every reviewer says they are amazing cameras, only for each one of them to go on and complain bitterly about the menu system. Because they have to think too hard to make it do what they want, when all they want to do is set it up quickly and take pictures with it. The same is true in operation. The camera "gets out of the way" by being very straightforward when actually taking pictures.

So in many ways this is a great camera. So this won't excite the cognoscenti, nor will you get any "ooohs" or "aaahs" if you bring it out at your next beer and cameras meetup. Just be sure not to use any digitalonly EFS lenses with it, as you may well damage something. All scanned at home on my Epson 4870 scanner. Conclusions So having started this review by dismissing the Canon EOS 300 out of hand I find myself liking it an awful lot. This really is a great camera. It sits in a sweet spot in the EOS range, with better performance and a smaller size than the early models such as the EOS 620, whilst being less complex than the more serious models like the EOS 30. So in that regard it's something of a Goldilocks camera, it's just right. It is the sort of camera that is capable enough that it will happily take you from beginner to knowledgeable amateur. And it costs so little that you don't

have to worry too much about whether it gets damaged or lost. So just like Jezza's small car, you're getting an awful lot of camera for not a lot of money. If you grow to enjoy film photography then it is unlikely to be your last proper camera; there are so many camera types to try and enjoy, from compacts to rangefinders to medium and large format. But as a first film camera you really can't go wrong. So there you have it the Canon EOS 300, not a great camera, but a great camera.

Alternatively, please feel free to chuck a few pennies in the tip jar via Kofi Become a Patron. Learn about where your money goes here. Would like to write for 35mmc. My wife had picked it up for me from a car boot sale for around 5 euros and I put 2 batteries in it to just check if it works. Everything seemed to work but like I said I never bothered to shoot with it and left it lying around on a shelf. Reading this tonite I think I might give this camera a go. Thanks for this review and keep up this amazing good work dude, Love 35mmc. Reply Malcolm Myers September 2, 2018 at 727 am Thanks Victor.

Like I said, it's not an M6 but I think it's a great everyday camera. I'm sure you'll enjoy using it. Reply Leo Tam September 1, 2018 at 1021 pm The battery grip lets you use AAA batteries. Reply Luis Sandoval September 2, 2018 at 1237 am Lovely images. Reply Malcolm Myers September 2, 2018 at 738 am Thank you Luis. I'll never be a great photographer but I will have some decent photos of my family to look back on when they're older. And that's pretty much my hobby camera collecting and capturing memories. Reply Kevin Thomas September 2, 2018 at 1055 pm Great review. Thanks for letting us know at least one from the Nikon stable. Reply Johnny September 3, 2018 at 604 pm I have the same setup as Leo, the 300 with the 40 2.8 lens. I too use it as an alternative to carrying a point and shoot. Reply Steve Smith November 5, 2018 at 434 pm I got into photography in the late nineties by buying my first SLR, an EOS 500n, the predecessor I believe of the 300. I thought it was great, and really thought I was quite the photographer because I had an SLR. I took it travelling around Australia, and don't ever remember wishing I had anything better. Whatever film camera you use, when the shutter is open it's just the film and the lens, and you can always add a better lens it was great with a 50mm 1.8. I'm pretty sure upgrade anxiety is something that comes with experience, and digital. I only stopped using it when someone loaned me a Nikon FE and I decided to carry on the Nikon path. Saw one in a junk shop recently for about 14, was tempted to buy it for nostalgia but saved my money. Reply Nigel Cliff January 3, 2019 at 840 pm Picked one up today in a charity shop and it cost an extortionate 10 with a measly 3580, it will though be a nice partner for my 50mm f1.8 mk1, looking forward to using it Reply Malcolm Myers January 4, 2019 at 159 pm I think you'll find yourself using it a lot Nigel. Reply Silje January 23, 2019 at 1018 am Hi. Wonderful review!

I'm shooting my way through my first roll of film using this camera, my first dip into film where it's not just a basic point and shoot. I have used DSLRs quite a lot, and have some lenses for them. The guy I asked at my local photography shop wasn't quite sure, and advised me using the one that came with the camera, but it's not the greatest with quite a high aperture. Maybe you can help Thank you! Reply Malcolm Myers January 23, 2019 at 1141 am Hi Silje, The EOS 300 film camera will take all EF lenses. These have a red dot to line up with the bayonet fitting, so the 50mm f1.4 should be fine. EFS lenses like the kit you lens you probably got with your DSLR have a white dot and are for crop sensor DSLR cameras only; don't use them on any Canon film SLR or fullframe DSLR or you will likely cause some damage. This is because the whitedot EFS lenses protrude further back into the camera and the mirror on a fullframe camera will smack against the back of an EFS lens when you take a picture. So you can use a 50 mm f1.4 EF lens with a red dot on an EOS 300, but you must not use a whitedot EFS lens. Hope that clears it up. Reply Gabriel Girma June 19, 2019 at 531 pm Could you possibly tell me which film I should buy to use with this camera. And from where Reply Malcolm Myers June 19, 2019 at 640 pm Hi Gabriel, There are loads of films available from Ilford, Kodak, Fuji, Lomography, the list goes on. You can have colour or black and white. You don't say which country you are in but I'm sure if you Google "photographic film" you should find a local supplier.

You need 35 mm film. Reply Jacqueline Holmes April 14, 2019 at 117 pm Just discovered I have an EOS300 and was about to get rid of it to buy another film camera so you've saved me from doing that, going to get batteries instead. I'll be following you as a Patron Big thanks! Reply MJ December 12, 2019 at 937 am Hey Malcolm. Great review. My partner just got me this camera as a Christmas gift with a Tamron 18200mm lens.

I can't quite figure out the auto focus on this one and I was wondering if you could help me at all. I can hear the beep and the green dot comes up but the rectangles don't light up. I was using Aperture priority mode. Thanks so much for your blog. I love the process of shooting with old cameras, but I also love getting correctly exposed, infocus shots pretty much all the time. It may be ugly and uninspiring, but it weighs so little, you can easily throw 2 or even 3 in your bag, to switch between film types. And of course, being Canon, you can find lenses for it everywhere.
